IN THE CLAIMS:

Please amend the claims as follows:

1.　(amended) A communication method for providing
information in an intelligent network including a
transmission layer having a user terminal and a switching
system connected through a first network and an intelligent
layer connected to said transmission layer through a second
network for issuing a connection command of a line to said
transmission layer, comprising the steps of:

[a step of] entering by a user a connection number
of the user terminal, a connection number of an information
provider terminal and a time to receive an [the] information
providing service into a user database provided in said
transmission layer;

[a step of] reading data registered in said user
